Report Overview

AM EAS (Acoustic Magnetic Electronic Article Surveillance) Detection System is a security system used in retail stores to prevent theft. It consists of two main components: a transmitter and a receiver. The transmitter emits a continuous radio frequency signal that interacts with a small strip or tag attached to merchandise. When an item with the tag passes through the detection zone, the signal is interrupted, triggering an alarm to alert store personnel of potential theft. AM EAS systems are commonly used in conjunction with other security measures, such as CCTV cameras and security personnel, to enhance store security and reduce shoplifting incidents.
