Report Overview

Amazon DynamoDB is a fully managed NoSQL cloud database service offered by Amazon Web Services that can be used for storage and retrieval of data related to websites, games, mobile apps, advertisements, and other applications. Unlike some similar databases, Amazon DynamoDB offers developers a pricing model based on throughput, rather than storage. Amazon offers users an in-memory cache called DynamoDB Accelerator (DAX) that can reduce transfer latency from milliseconds to microseconds. Amazon DynamoDB consulting services assist clients with configuring and deploying this program. In addition to implementation, some of the providers in this category assist with additional training or support related to Amazon DynamoDB, as well as other IT consulting services or implementation services such as Amazon Aurora consulting.
