Abstracts

Ambulatory polysomnography devices are portable devices used to conduct sleep studies outside of traditional sleep clinics, typically in a patient's home. These systems monitor similar physiological data as in-lab polysomnography, including brain waves, breathing patterns, heart rate, and oxygen levels, but are designed for more convenient, real-world settings. Ambulatory systems are often used to diagnose sleep disorders like sleep apnea while minimizing disruptions to the patient's regular sleep environment. They offer a more accessible option for patients who prefer or require home-based assessments.

The global Ambulatory Polysomnography Device market size was estimated at USD 338.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
