Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Amino-Dithiophosphate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Amino-Dithiophosphate is used for flotation of non-ferrous metal sulfide ores, which has the characteristics of strong collection ability and good selectivity. This product is mainly used for flotation of lead and copper minerals in the presence of sphalerite and sulfide iron ore, and has a significant effect on improving the recovery rate of gold and silver flotation. Due to the use of aniline black powder in the flotation process, sometimes the cyanide inhibitor of sphalerite can be omitted. In 2024, global Amino-Dithiophosphate production reached approximately 23842 MT, with an average global market price of around US\$ 2978 per MT. The annual production capacity of a single production line is 500 tons, with a gross profit margin of about 30%. Upstream raw materials: aniline (C₆H₅NH₂), carbon disulfide (CS₂). Downstream applications: lead mineral flotation, copper mineral flotation, etc. Raw material costs account for about 85%-95%; manufacturing expenses account for about 5%-15%.

The global Amino-Dithiophosphate market size was estimated at USD 71.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.90% during the forecast period.
