Abstracts

Aminosilane coupling agents are organosilicon compounds that contain both amino functional groups and alkoxy silane groups. These bifunctional molecules serve as molecular bridges, enhancing adhesion between organic polymers and inorganic substrates. The alkoxy silane groups hydrolyze in the presence of moisture, forming silanol groups that can bond with hydroxyl groups on inorganic surfaces like glass, metals, or minerals. Simultaneously, the amino groups react with organic polymers, facilitating strong covalent bonds. This dual reactivity improves the mechanical properties, durability, and moisture resistance of composite materials. Aminosilane coupling agents are widely used in industries such as adhesives, coatings, sealants, and fiber-reinforced composites to enhance performance and longevity.

The global Aminosilane Coupling Agent market size was estimated at USD 413.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
