Report Overview

Ammonium carbamate is a salt of carbamic acid and ammonia. The compound is white, crystalline and soluble in water. Ammonium carbamate is manufactured by reaction of ammonia with dry ice (liquid carbon dioxide). It is used as a substitute for ammonia in certain applications. Ammonium carbamate is used as an elementary material for manufacturing ammonium carbonate. Ammonium carbamate is used as decomposition controller along with metal phosphides. In addition, it is also used for detoxification of off-gases.

The market ammonium carbamate was mainly driven by increased demand for urea from agriculture sector. Ammonium carbamate is used in the production of carbamoyl phosphate, an important ingredient in urea cycle, where it is used as intermediate. It is also used in the manufacturing of pyrimidines. In addition, ammonium carbamate is also used in pesticides and fumigants to control rodents and insects. Increasing use of pesticides can be major opportunity for the growth of the market. However, health hazards and environmental issues can be major restraint for the ammonium carbamate market.
