## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ammonium Myreth Sulfate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ammonium Myreth Sulfate is a mild anionic surfactant made by sulfating and neutralizing ethoxylated fatty alcohols (typically C12-C14 or myristyl-based) for use in personal-care cleansing products, with an industry chain that starts upstream from petrochemical or natural oils/fats used to make fatty alcohols and ethylene oxide plus sulfur trioxide/oleum and ammonia, moves midstream through ethoxylation, sulfation, neutralization, concentration and standardization by surfactant and ingredient manufacturers, and finally flows downstream into applications such as shampoos, shower gels, facial cleansers, bubble baths and other toiletry formulations where it provides foaming, cleansing and mildness. In 2024, global Ammonium Myreth Sulfate production reached approximately 20.1 K MT, with an average global market price of around US\$ 2745 per MT. The global single-line production capacity ranges from 2000 to 3000 MT per year. The industry's gross profit margin is approximately 20%-25%.
