Abstracts

Ammonium sulphate phosphate (ASP) is a compound fertilizer consisting of a mixture of ammonium sulphate and monoammonium phosphate or diammonium phosphate, providing a balanced supply of nitrogen, phosphorus, and sulphur—three essential macronutrients for plant growth. It is valued for its high nutrient content, water solubility, and suitability for a wide range of crops, particularly those with high sulphur requirements such as oilseeds, legumes, and cereals. ASP is often used in regions where soil sulphur deficiency is prevalent or as a targeted fertilizer to improve both yield and crop quality, offering advantages over single-nutrient fertilizers by enabling more efficient nutrient management and reducing application costs.

The global Ammonium Sulphate Phosphate market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
