## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AMOLED Display Driver IC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An AMOLED display driver IC (DDIC) is a chip designed specifically to control and drive active-matrix organic light-emitting diode (AMOLED) screens on devices such as mobile phones. It implements pixel-level voltage and signal control to produce high-contrast, wide-color-gamut, and fast-response image displays. Global shipments of this type of driver IC are expected to reach approximately 1.3 billion units in 2024, with an average selling price of approximately \$3.0 per unit. The upstream suppliers of AMOLED display driver ICs are mainly silicon wafer, semiconductor material and EDA design tool providers. The midstream manufacturers include IC design companies, wafer foundries and packaging and testing plants, which are responsible for the research and development, production and packaging and testing of driver chips. The downstream users are mainly panel manufacturers and complete machine manufacturers, including smartphones, tablets, wearable devices and automotive display system manufacturers, who integrate driver ICs into AMOLED panels and apply them to terminal products.

The global AMOLED Display Driver IC market size was estimated at USD 3900.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.
