The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AMOLED Evaporation Sources competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Linear Evaporation Sources production reached approximately 840 units, with an average global market price of around 740 K US\$/unit. AMOLED evaporation sources are thermal deposition devices used to deposit organic emissive materials onto active matrix substrates in AMOLED displays. By heating source materials under high vacuum, these sources enable precise deposition of red, green, and blue layers onto TFT backplanes. Evaporation sources are mainly categorized into linear and point types: linear sources are ideal for large glass substrates, while point sources are used in small displays or R&D setups. Accurate temperature control and uniform material flow are critical. These sources play a key role in the manufacturing of high-resolution, high-brightness AMOLED panels.

The global AMOLED Evaporation Sources market size was estimated at USD 622.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
