Report Overview

Fine Metal Mask (FMM) is a metal material board that is thinner than paper, and is a consumable core component for the production of organic light-emitting diode (OLED) displays. FMM has many microscopic holes that are invisible to the naked eye. Its main role is to deposit RGB organic substances and form pixels during the OLED production process to ensure the resolution and yield of the panel. It is a core and challenging technology in the production of OLED displays, and it is expected to have high growth potential as a new market in the future.

As active-matrix organic light-emitting diode (AMOLED) displays quickly displace liquid crystal displays (LCDs) in smartphones, panel makers are rapidly adding new production capacity, accelerating the demand for the fine metal mask (FMM), a critical production component used to manufacture red-green-blue (RGB) AMOLEDs.
