The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Amorphous Alloy for Motor Core competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Amorphous alloy for motor core is a special alloy material used in the manufacturing of motor cores. It is formed through a special process such as rapid solidification technology. The alloy melt is cooled at an extremely high speed so that the atoms do not have time to form a regular crystalline structure, resulting in an amorphous (or glassy) state alloy. Microscopically, this alloy does not have the long - range ordered arrangement like traditional crystalline materials but shows a short - range ordered and long - range disordered atomic arrangement state.

The global Amorphous Alloy for Motor Core market size was estimated at USD 81.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.50% during the forecast period.
