Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Amorphous Hydrogel Dressing competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Amorphous hydrogel dressing is a non-crystalline gel material formed by hydrophilic polymers (such as polyvinyl alcohol, carboxymethyl cellulose) and water. It has a high water content (70%-95%), air permeability and biocompatibility, and can be filled into irregular wounds by syringe or smearing. It forms a three-dimensional network structure through physical/chemical cross-linking, which can absorb exudate, maintain a moist environment and promote autologous debridement. It is suitable for chronic wounds (such as diabetic ulcers), burns, postoperative wounds, etc. Compared with traditional dressings, its advantages are good fit, reduced pain during dressing changes, and some products contain antibacterial ingredients (such as silver ions).

The global Amorphous Hydrogel Dressing market size was estimated at USD 681.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
