## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Amorphous Polypropylene competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Amorphous Polypropylene (APP) is a non-crystalline, rubbery form of polypropylene that lacks the ordered molecular structure found in isotactic polypropylene. Due to its irregular chain configuration?primarily atactic in nature?it does not crystallize, resulting in a transparent, soft, and tacky material. APP is typically a by-product during the polymerization of isotactic polypropylene and is often blended with other polymers or used as a modifier to enhance elasticity, impact resistance, and adhesion in applications such as hot melt adhesives, sealants, roofing membranes, and polymer blends. Its low melting point and flexibility make it useful in products requiring good low-temperature performance and compatibility with tackifiers.

The global Amorphous Polypropylene market size was estimated at USD 754.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Amorphous Polypropylene market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
