Report Overview:

An amperometric chlorine analyser is an analytical device used to measure trace amounts of free available chlorine (FAC), total available chlorine (TAC), and combined chlorine (CHLOR) present in water samples. It operates based on electrochemistry principles using an electrode equipped with an electrical potential capable of promoting oxidation reactions when dissolved oxygen gas bubbles are present. When sample passes through the analyzer, this reaction occurs leading to electrons transfer between the electrodes and results in measurable changes in electrical conductivity, which indicates presence of chlorine in the sample.

The Global Amperometric Chlorine Analyzer Market Size was estimated at USD 485.02 million in 2023 and is projected to reach USD 631.62 million by 2029, exhibiting a CAGR of 4.50% during the forecast period.
