Abstracts

An amphibious trailer is a specialized type of trailer designed to operate both on land and in water. These trailers are typically used for transporting vehicles, goods, or equipment to locations that are difficult to access via conventional land-based transportation, such as remote islands, flood zones, or wetlands. They are engineered to be towed by a vehicle or, in some cases, powered independently, and can transition between land and water seamlessly. Amphibious trailers are often equipped with wheels or tracks for land mobility and flotation devices or pontoons to ensure buoyancy when in water.

The global Amphibious Trailer market size was estimated at USD 288.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
