Abstracts

The AMR angle sensor is a magnetic field sensor that works based on the anisotropic magnetoresistance (AMR) effect. The AMR effect means that when current passes through a magnetic material, its resistance value changes as the angle between the magnetic field direction and the current direction changes. In recent years, with the rapid development of the global AMR sensing IC market, the market size of AMR angle sensors has also been expanding. It is expected that in the next few years, with the continued development of new energy vehicles, robots and automation, the market demand for AMR angle sensors will further increase. As a major global manufacturing country, China also has a strong demand for AMR angle sensors. Especially in high-end manufacturing fields such as new energy vehicles, medical equipment, aerospace, etc., AMR angle sensors have broad application prospects.
