Abstracts

An anaerobic digester tank is a sealed, oxygen-free vessel designed to facilitate the anaerobic digestion process, wherein organic matter such as agricultural waste, food scraps, sewage sludge, or energy crops is broken down by microorganisms to produce biogas?primarily methane and carbon dioxide?and digestate, a nutrient-rich substance that can be used as fertilizer. These tanks are engineered to maintain optimal temperature, pH, and mixing conditions to maximize microbial activity and biogas yield, and they vary in design, including covered lagoons, complete-mix digesters, plug-flow digesters, and fixed-film reactors, depending on feedstock characteristics and operational goals such as waste treatment, renewable energy generation, or odor control.
