## Abstracts

Anal fistula treatment involves use of both surgical and non-surgical approaches for effective removal of anal fistulae in patients. Surgical procedures include fistulotomy, bioprosthetic plugs, advancement flap procedures, seton techniques, and new techniques such as LIFT and FiLaC therapy. A significant driver in the anal fistula surgical treatment market is the persistently high incidence of anal fistulas and the demand for definitive and curative interventions. Surgical treatments offer the potential for complete fistula closure and relief from the discomfort and complications associated with this condition. However, a notable challenge in this market is the potential for surgical complications and post-operative morbidity.
