Report Overview

Analog, or electro-pneumatic, positioners. Here, the input signal is electrical, rather than pneumatic. This current becomes a pneumatic pressure that is fed to the bellows. Otherwise, this type of positioner works in the same way as a pneumatic positioner. Each of the positioners can be configured to be direct-acting or reverse-acting. The cam can also be changed to modify the performance of the valve from linear action to equal percentage or quick opening.
