Report Overview

High-performance liquid chromatography (HPLC) systems are used to analyze and/or purify liquid mixtures. Analytical HPLC systems are used in the food safety, pharmaceutical, and manufacturing industries, as well as in medical and research laboratories. Two of the most common types of analytical HPLC systems are normal phase HPLC and reversed phase HPLC. Normal phase uses a polar stationary phase and a non-polar mobile phase to separate components of a mixture, while reversed phase HPLC uses phases with the opposite polarities of normal phase HPLC. The sample liquid is mixed with the mobile phase and run through a column that contains the stationary phase. The way the sample moves through the column is the basis for the analysis.
