Report Overview:

An anamorphic prism pair is a pair of prisms which is usually used for reshaping the profile of a laser beam. For example, the elliptical beam from a laser diode can be transformed into a beam with circular cross-section, as is needed for many applications, by using a prism pair as a beam expander for only one direction (e.g., the horizontal one). Of course, one can also just modify the ellipticity, or convert a circular beam into an elliptical one.

The Global Anamorphic Prism Pair Market Size was estimated at USD 846.79 million in 2023 and is projected to reach USD 1328.88 million by 2029, exhibiting a CAGR of 7.80% during the forecast period.
