Report Overview

Ancillary reagents are used during the manufacturing of cell therapy products, however, are not intended to be part of the final products. The ancillary reagents are used as a growth and survival promoter for certain cell populations and have profound effects on a cell product. Ancillary reagents for cell based therapies include antibiotics, cytokines, growth factors, culture media, enzymes and serum derivatives. Ancillary reagents might affect the efficacy of cell based products, thus, quality assurance of ancillary reagents are critical for cell based products. The standards for ancillary reagents are developed by The US Pharmacopeia Convention (USP). On the other hand, there are no regulations specific for the ancillary reagents.

The growth ancillary reagents market is primarily driven by the growing manufacturing practices of cell based therapies, growing research and development activities for the development of cell and tissue based therapies there by increasing adoption of ancillary reagents.
