Report Overview

Aneroid barometer is a kind of barometer, the most common is metal box barometer. Its main part is a kind of vacuum metal box with corrugated surface. In order not to flatten the metal box by atmospheric pressure, the elastic steel sheet is used to pull it outwards. With the increase of atmospheric pressure, the cover of the box is concave; As the atmospheric pressure decreases, the elastic steel plate pulls up the cover. The change of the box cover is transmitted to the pointer through the transmission mechanism to deflect the pointer. From the reading on the dial under the pointer, we can know the value of atmospheric pressure at that time.
