## Abstracts

Angelica root contains volatile oil, the main components of volatile oil are butylene phthalide, o-carboxyphenyl n-pentanone, dihydrophthalic anhydride, vitamin B12, sucrose, vitamin A, palmitic acid, stearic acid, myristic acid, unsaturated oleic acid, linoleic acid,  $\beta$ -sitosterol, etc. Angelica acts as a mild sedative, laxative, diuretic, antispasmodic, and pain reliever, improves blood flow, strengthens the reproductive system, and helps the body utilize hormones. Used to treat women's ailments such as hot flashes and other menopausal symptoms, PMS and vaginal dryness. Regulating menstruation and relieving pain: Angelica can nourish and harmonize blood, regulate menstruation and relieve pain, moisten dryness and smooth intestines. Cardiovascular health care: Modern pharmacological studies have pointed out that angelica can resist hepatic coma, relieve spasm, and enhance the body's immune function. Promote blood circulation: Angelica contains vitamin B12, which can strengthen blood vessels and promote hormone production; folic acid can assist DNA and protein synthesis; iron is an important component of heme and myoglobin, which can prevent anemia. All three ingredients above can increase red blood cell production and strengthen blood circulation. According to the "Global Use of Medicines 2023" released by the IQVIA Institute, the global drug expenditure in 2022 will be approximately US\$1.48 trillion (excluding costs related to COVID vaccines and therapies), and it is predicted that it will grow at a rate of 3%-6% in the next few years. In terms of regional development trends, high-income countries such as Western Europe, North America, and Japan are expected to experience slower growth in the next few years due to already high per capita usage, while growth markets such as Asia, Latin America, and Eastern Europe are expected to grow strongly. In terms of drug expenditure, China's drug expenditure in 2022 will be about 166 billion US dollars. It is expected that the expenditure on medicines will only increase in the next few years: From the perspective of demand, the trend of population aging, the increase of residents' wealth and the improvement of

health awareness will drive the demand for medicines; from the perspective of national strategy, in 2016, the State Council issued the "Healthy China 2030" Planning Outline, and "Healthy China" has risen to a national strategy; from the perspective of industry policy, it has experienced the uncertainty brought about by the initial stage of medical reform, the implementation of the centralized procurement policy and the expansion of the drug reimbursement catalog. The update will gradually achieve a dynamic balance of multiple goals such as promoting innovation, stabilizing supply, and reducing the burden on the masses. Global Use of Medicines 2023 shows that, based on net ex-factory prices, the U.S. market will spend about \$62.9 billion on medicines in 2022. Overall growth slows as the Inflation Reduction Act (IRA) spends \$64 billion to reduce prescription drug prices, and the adoption of new treatments is expected to increase over the next few years, with ex-factory discounts and rebates in drug distribution, the impact of patent expiration, and generic or biosimilar competition will also affect the U.S. pharmaceutical market.

The global Angelica Sinensis Extract market size was estimated at USD 451.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
