Abstracts

Anhydrous sodium sulfide is a chemical compound with the formula Na_2S , characterized by the absence of water in its crystalline structure, which ensures high purity and reactivity. It is primarily used in the leather industry for dehairing hides, in the pulp and paper industry as a delignifying agent, and in water treatment for heavy metal precipitation. It also serves as a key intermediate in the production of sulfur dyes, photographic chemicals, and other specialty chemicals. The market demand is closely tied to industrial manufacturing activities, particularly in regions with strong textile, leather, and mining sectors. As an alkali sulfide, it is valued for its reducing properties and solubility, though its handling requires strict safety measures due to its corrosive nature and potential release of toxic hydrogen sulfide gas.

The global Anhydrous Sodium Sulfide market size was estimated at USD 520.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
