Abstracts

Anilox Cleaning Machines are specialized machines designed to clean anilox rollers, which are critical components in printing processes like flexographic printing and gravure printing. Anilox rollers are used to transfer a precise amount of ink or coating to the printing surface. Over time, ink and debris can build up in the tiny cells (also known as "anilox cells") on the roller's surface, which can lead to issues like inconsistent ink transfer, print defects, or reduced print quality.

The global Anilox Cleaning Machines market size was estimated at USD 76.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
