## Abstracts

Animal antibacterial peptides, also known as host defense peptides, are short-chain amino acid sequences naturally produced by animals as part of their innate immune response, designed to combat a broad spectrum of pathogens including bacteria, fungi, and viruses. These peptides function by disrupting microbial cell membranes or modulating immune responses, offering an alternative or complementary mechanism to conventional antibiotics, particularly in light of increasing antimicrobial resistance. Their applications span pharmaceutical development for human and veterinary medicine, livestock health management to reduce antibiotic use in agriculture, and even potential roles in aquaculture and food preservation, positioning them as a growing segment within the broader antimicrobial and biotech markets.

The global Animal Antibacterial Peptide market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
