Report Overview

Animal cell cultured meat, also known as cell-based meat, lab-grown meat, or clean meat, is a type of meat that is produced by culturing animal cells in a lab instead of raising and slaughtering whole animals. The process begins by obtaining a small sample of animal cells, usually from muscle tissue, and then growing these cells in a nutrient-rich environment that simulates the conditions in the animal's body. Over time, the cells multiply and differentiate into muscle fibers, eventually forming a piece of meat that can be harvested and processed.
