Abstracts

Animal-derived dural patches are surgical repair materials made from animal tissues, such as bovine or porcine collagen. These patches are primarily used in neurosurgery to repair the dura mater and promote tissue healing by mimicking the natural structure of the dura. Animal-derived patches are known for their high biocompatibility and ease of use in various surgical applications.

Superior Biocompatibility: Animal-derived dural patches are often preferred for their excellent biological compatibility with human tissue, reducing the risk of rejection or adverse reactions.

Increased Surgical Applications: The growing number of neurosurgical procedures, including spinal and brain surgeries, is increasing the need for materials like animal-derived dural patches that can support tissue regeneration.

Emerging Markets Growth: As the demand for advanced medical treatments increases in emerging economies, the adoption of animal-derived dural patches is expected to rise, given their affordability and efficacy.

Development of Next-Generation Materials: Research into improving the properties of animal-derived patches, such as enhancing their strength, elasticity, and tissue integration, provides significant market growth opportunities.

Ethical and Religious Concerns: The use of animal-derived materials in medical devices raises ethical concerns, especially in regions with large populations that have religious or cultural objections to the use of animal products.

Potential for Disease Transmission: Even with rigorous screening processes, the risk of disease transmission from animal sources can limit the widespread adoption of animal-derived dural patches.

Animal-Free Alternatives: The increasing demand for synthetic and plant-based alternatives to animal-derived materials is a growing trend, as some healthcare providers seek to avoid animal products for ethical or safety reasons.

The global Animal Derived Dural Patch market size was estimated at USD 641.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
