Abstracts

Animal external medicine refers to medications or treatments applied externally to treat various conditions affecting the skin, coat, ears, eyes, and external parts of animals. These medications are designed to address external issues such as infections, parasites, allergies, wounds, and other dermatological conditions. These medications are used to treat bacterial skin infections, wounds, or cuts. They help prevent infection and promote healing. Examples include topical ointments or creams containing antibiotics like neomycin or polymyxin B. These are used to treat fungal infections on the skin, such as ringworm or yeast infections. They inhibit the growth and spread of fungi. Common antifungal medications for animals include creams or sprays containing ingredients like clotrimazole or miconazole. In animals with sensitive skin or exposed to prolonged sun exposure, sunscreen products specially formulated for animals can be used to protect against harmful UV rays.
