Abstracts

Animal feed mycotoxin binders are specialized feed additives designed to mitigate the negative effects of mycotoxins?toxic secondary metabolites produced by fungi such as *Aspergillus*, *Fusarium*, and *Penicillium*?which can contaminate grains and other feed ingredients. These binders function by adsorbing or neutralizing mycotoxins in the gastrointestinal tract of animals, reducing their bioavailability and preventing adverse health outcomes, such as reduced growth rates, immune suppression, and organ damage. Typically composed of materials like clay minerals (e.g., bentonite, montmorillonite), yeast cell walls, or activated charcoal, mycotoxin binders are an essential tool in livestock and poultry production to ensure feed safety, optimize animal performance, and comply with regulatory standards for mycotoxin levels in animal diets.

The global Animal Feed Mycotoxin Binder market size was estimated at USD 350.68 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
