Report Overview:

Organic trace minerals have vital role in maintaining animal health. The rate of absorbing the food increases with the presence of trace minerals in the feed, and they improve the nutrient content in animal feed. Growing occurrences of disease outbreaks, such as avian influenza (AI), in poultry and turkey have increased the demand for these minerals. Bioavailability is another factor that differentiates organic and inorganic trace minerals in animal feed. Poultry was the largest consumer of organic trace minerals in animal feed in 2016. The demand for broilers, chickens, and turkeys has witnessed a steady increase, particularly in countries with growing food industries such as China, India, and Brazil, which has played a key role in growing animal feed consumption in these countries.
