Abstracts

Animal internal dewormer refers to a medication or treatment used to eliminate or control internal parasites, commonly known as worms, in animals. These parasites can include roundworms, tapeworms, hookworms, whipworms, and others. These are typically in the form of tablets, pills, or liquids that are administered orally to the animal. They contain active ingredients that specifically target and eliminate certain types of internal parasites. Some dewormers are available in the form of injectable medications. These are usually administered by a veterinarian and are effective against a broad range of internal parasites. In livestock, dewormers can be added to their feed or water. These additives contain active ingredients that work to eliminate or control internal parasites when ingested by the animals. Certain dewormers may come in combination with other medications, such as flea control or heartworm prevention, to provide comprehensive parasite protection for the animal.
