### Report Overview

Fibers are the materials which have discretely elongated pieces and can be spun into threads and filaments. Fibers are classified into natural, synthetic and man-made. Natural fibers consist of animal and plant fibers. Animal fibers consist of protein chains such as wool, silk, fur, hair and feathers among others. Plant fibers consist of field crops such as cotton, jute and linen among others.

The market for animal and plant fibers was mainly driven by end-user industries such as textiles and paper processing. In textiles, animal and plant fibers are used in making luxury clothes, carpets, decorations, laces, tents, sails, bagging, sacks, floor coverings and commercial fabrics among others. In paper processing, plant fibers are combined with the wood pulp in manufacturing of all kinds of paper and cardboards. In composite industry, animal and plant fibers are used as reinforcement materials in plastics and wallboards. Animal and plant fibers are also used as stuffing material in mattresses and upholstery. In packaging industry, plant fibers are used bags and vessels made-up of jute and hemp. Animal and plant fibers are also used in manufacturing of paint brushes and braided articles such as hats, baskets and mats. In boating industry, animal and plant fibers are used in manufacturing of small boats such as canoe, where they offer more durability than steel and bamboo boats. In spite of so many applications in various end-user industries, greater extent of animal and plant fibers in the market are being replaced by synthetic fibers thus acting as potential threat to the market.
