Abstracts

Taurine is an essential amino acid-like compound widely used in animal nutrition, particularly in pet food and aquatic feed formulations, to support critical physiological functions such as vision, heart health, reproduction, and bile salt formation in cats, dogs, fish, and other domesticated species. The market for animal nutrition taurine is driven by the rising global demand for high-quality pet food, increased awareness of pet health and wellness, expansion of aquaculture, and the compound's necessity as a dietary supplement in species that cannot synthesize it sufficiently endogenously. Key segments include synthetic taurine production, which dominates supply due to cost-effectiveness and purity, as well as natural sources, though these are less commercially prevalent. Geographically, North America and Europe represent mature markets with strong regulatory frameworks and high premiumization trends, while Asia-Pacific, led by China, a major producer and consumer, is experiencing rapid growth due to expanding pet ownership, intensification of aquaculture, and improving economic conditions. The market is characterized by the presence of established chemical and ingredient manufacturers, stringent quality and safety standards, and ongoing research into optimized dosage and application across animal species.

The global Animal Nutrition Taurine market size was estimated at USD 688.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
