Abstracts

Animal organic fertilizers are soil amendments derived from animal byproducts such as manure, bone meal, blood meal, feather meal, and fish emulsion, which undergo controlled decomposition processes to stabilize nutrients and eliminate pathogens, providing a slow-release source of essential macro- and micronutrients like nitrogen, phosphorus, and potassium while improving soil structure, water retention, and microbial activity. These products are certified organic when produced in compliance with standards that prohibit synthetic additives, antibiotics, or genetically modified materials, aligning with sustainable agriculture practices by recycling waste from livestock, poultry, and aquaculture industries into valuable inputs for crop production, gardening, and landscaping.
