Report Overview

Proteins extracted from various sources have become a necessity in the food and pharmaceutical industry. There are various sources from which proteins are extracted- plants, animals, eggs, and microbes. The animal protein ingredients include bone meal, blood meal, fish meal, feather meal, etc. They are usually derived from animal by-products. The products like hydrolase collagen and fish oil are very much dependent on the animal protein ingredients market. The animals are a much richer source of proteins and hence, the animal protein ingredients market lever an advantage and growth over its parallel industry, that is, plant-based proteins.

The animal protein ingredients are mainly used for consumption and it is found that both animals and humans show better digestibility than other protein derived from other sources such as plants and microbes. This is an advantage for the animal protein ingredients market over proteins manufactured from other sources. The evident growth for the animal protein ingredients market is evaluated by the growing meat industry because a large share of the animal-based proteins is obtained from the animal by-products from the slaughterhouse industry. The scientific fact that the animal proteins are a more abundant source of nutrients and are considered a whole food as compared to plant and other sourced proteins, also contribute to the growth of the animal protein ingredients market. Also, fishmeal which is an important source of animal protein ingredients, also promote the growth of the animal protein ingredients market, which can be attributed to the growing aquaculture industry. Also, the trend of the sustainable mode of production of meat and feed is being followed across the world and contributes to the animal protein ingredients market as a macroeconomic factor. On the other hand, people are opting for more and more vegan and vegetarian sources for health benefits, and this may hinder the growth of the animal protein ingredients market.
