Report Overview

Animal-sourced squalene is a naturally occurring hydrocarbon derived primarily from shark liver oil, though it can also be extracted from other marine sources such as deep-sea fish. It is a key intermediate in the biosynthesis of cholesterol and other sterols, making it valuable in pharmaceuticals, cosmetics, and dietary supplements. In cosmetics, squalene is prized for its emollient and antioxidant properties, enhancing skin hydration and protection. The pharmaceutical industry utilizes it as an adjuvant in vaccines and drug delivery systems due to its biocompatibility and ability to stimulate immune responses. However, ethical and environmental concerns over shark harvesting have driven demand for sustainable alternatives, such as plant-based squalene (e.g., from olive oil or sugarcane), impacting the market dynamics of animal-derived products. Regulatory pressures and shifting consumer preferences toward cruelty-free and eco-friendly ingredients further influence its adoption and pricing.

The global Animal sourced Squalene market size was estimated at USD 134.53 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.26% during the forecast period.
