Animal model is a living, non-human animal used during the research and investigation of human disease, for the purpose of better understanding the disease without the added risk of harming an actual human being during the process. The animal model market is driven by the increasing demand for effective research tools to understand human diseases and develop new therapies. Animal models play a crucial role in studying disease mechanisms, drug safety, and efficacy, leading to advancements in medical research and pharmaceutical development. Additionally, the rise in chronic diseases and infectious outbreaks has propelled the need for animal models to study disease pathogenesis and evaluate potential treatments. However, challenges include ethical concerns related to animal experimentation, the need for appropriate models that accurately mimic human diseases, and the high cost and complexity of maintaining animal facilities and conducting experiments. Addressing these challenges through ethical guidelines, technological advancements, and the development of alternative research methods will be essential for the sustained growth of the animal model market.

The global Animal used in Research and Testing market size was estimated at USD 3573.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
