Abstracts

Animal used parasiticides are pharmaceutical and biological products specifically designed to prevent, control, or eliminate parasitic infestations in companion animals, livestock, and other domesticated species, encompassing a range of formulations such as topical spot-ons, oral tablets, injectables, collars, and sprays that target external parasites like fleas, ticks, and mites, as well as internal parasites including worms, heartworms, and protozoa. The market is primarily driven by the rising global pet ownership, increasing awareness of zoonotic diseases, growing demand for animal-derived protein products requiring healthy livestock, and advancements in parasiticide efficacy and safety profiles, with key segments divided by animal type (companion animals vs. production animals), parasite type, and distribution channels such as veterinary clinics, pharmacies, and online platforms. Regulatory frameworks, emerging resistance to existing compounds, and the development of novel active ingredients shape the competitive landscape, which is dominated by multinational animal health companies while also seeing growth in generics and natural alternatives.

The global Animal Used Parasiticides market size was estimated at USD 8950.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
