### Report Overview

Animation is the rapid display of static images in a way that creates the illusion of motion. Nowadays animation is used mostly in motion pictures and videos, plus some computer applications, such as moving icons, and in video games. Like photographic cinema, animated video usually incorporates sound for dialog, musical accompaniment, and other effects. But unlike photographic cinema, it can depict anything that the animation artist can imagine visually, and therefore it is especially useful for telling stories with fantasy elements that would be hard to stage in reality. Animation is also used to create special visual effects within movie productions that otherwise use traditional photographic methods.
