Abstracts

An Anionic Optical Brightener Agent is a fluorescent whitening compound designed to enhance the perceived whiteness and brightness of textiles, paper, detergents, and plastics by absorbing ultraviolet (UV) light and re-emitting it as visible blue light. The anionic (negatively charged) nature of these brighteners allows them to have strong affinity with cellulose-based fibers (e.g., cotton), protein fibers (e.g., wool and silk), and synthetic fibers (e.g., polyester, polyamide). This charge interaction ensures effective bonding, leading to long-lasting brightness in treated materials.

The global Anionic Optical Brightener Agent market size was estimated at USD 752.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
