Abstracts

Anionic phosphate esters are a class of organophosphorus compounds derived from the reaction of phosphoric acid with alcohols or phenols, resulting in molecules characterized by a central phosphorus atom bonded to oxygen and organic groups, with the presence of negatively charged (anionic) functional groups that make them surface-active and water-soluble; these compounds are widely utilized as surfactants, emulsifiers, corrosion inhibitors, lubricant additives, and flame retardants across multiple industries, including agrochemicals, textiles, metalworking, and personal care, due to their ability to reduce surface tension, enhance stability, and provide antistatic and dispersing properties.

The global Anionic Phosphate Ester market size was estimated at USD 1480.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
