## Abstracts

Anionic silanol surfactants are a class of surface-active agents that carry a negative charge (anionic) and contain silanol groups (Si-OH) in their molecular structure. These surfactants combine the properties of traditional anionic surfactants with the unique characteristics of silicon-based chemistry, such as enhanced thermal stability, surface activity, and compatibility with both organic and inorganic systems. The presence of silanol groups allows for strong interactions with various surfaces, making them useful in applications like coatings, emulsions, personal care products, and detergents. Their molecular design offers improved wetting, spreading, and emulsifying capabilities compared to conventional surfactants.

The global Anionic Silanol Surfactants market size was estimated at USD 164.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
