## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Anisotropic Conductive Liquid Paste competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Anisotropic Conductive Liquid Paste (ACLP) is a specialized conductive adhesive that conducts electricity primarily in one direction—typically the vertical (z-axis) direction—while remaining electrically insulating in the horizontal (x-y) plane. It consists of a liquid resin matrix (such as epoxy or silicone) filled with conductive particles (like metal-coated polymers or silver particles) that form conductive paths only when compressed between two electrodes. ACLP is used for fine-pitch electronic interconnections, such as bonding flexible circuits, flat panel displays, and semiconductor devices, offering precise electrical connections while preventing short circuits between adjacent pads.

The global Anisotropic Conductive Liquid Paste market size was estimated at USD 170.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
