## Abstracts

Magnetic field sensor is a device used to study the magnetic field around coil, electrical device and around permanent magnets. Magnetic field sensors consist of rotating sensor tip which measures both transverse and longitudinal magnetic fields around the objects. Magnetic sensor uses "Hall Effect" (produces voltage difference across electrical conductor, transverse to electric current) transducer that measures vector component of magnetic field near the sensor tip. Globally, growth of consumer electronics and appliances, and increasing demand in automotive industry are the prime growth driver of magnetic field sensor market. In addition, rising demand for hybrid and electric vehicles will create new opportunities for magnetic field sensor market. However, inconsistent strength of magnetic field and Others technological limitations are key restraints for magnetic field sensor market.
