Abstracts

Ankylosing spondylitis (AS) is a chronic inflammatory rheumatic disease primarily affecting the axial skeleton, characterized by inflammation of the spine and sacroiliac joints, leading to pain, stiffness, and potential structural damage and loss of mobility over time. The AS drug market consists of pharmaceutical products aimed at managing symptoms, reducing inflammation, slowing disease progression, and improving patients' quality of life, including nonsteroidal anti-inflammatory drugs (NSAIDs), conventional disease-modifying antirheumatic drugs (DMARDs), biologic DMARDs such as TNF inhibitors (e.g., adalimumab, etanercept) and IL-17 inhibitors (e.g., secukinumab, ixekizumab), and more recently, targeted synthetic DMARDs like JAK inhibitors (e.g., tofacitinib). The market is driven by increasing disease prevalence, improved diagnostic capabilities, growing patient awareness, and advancements in biologic and targeted therapies, with a strong emphasis on personalized treatment approaches and the development of novel mechanisms of action to address unmet needs in refractory cases. Key players include pharmaceutical companies such as AbbVie, Novartis, Johnson & Johnson, Pfizer, and Eli Lilly, competing through innovation, clinical efficacy, safety profiles, and market access strategies, while facing challenges related to high treatment costs, reimbursement policies, biosimilar competition, and the need for long-term safety data.

The global Ankylosing Spondylitis Drug market size was estimated at USD 5572.43 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
