Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Annealed Spring Steel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Annealed Spring Steel production reached approximately 10.45 million tons, with an average global market price ranging from US\$ 880 to 1,250 per ton. The gross profit margin of major companies in the industry is between 26% – 39%. Single-line production capacity is 160,000 – 320,000 tons/year. Annealed Spring Steel is a modified spring steel product processed via annealing heat treatment: it is heated to a specific temperature (usually 700–900°C), held for a certain period, and then cooled slowly. This process reduces internal stress, lowers hardness (Brinell hardness typically 150–220 HB), and improves ductility, making the steel easier to form (e.g., bending, stamping) while retaining the core elastic properties of spring steel. It is widely used in automotive components (suspension springs, clutch springs), industrial machinery (valve springs), and consumer goods (watch springs, tool springs).

The global Annealed Spring Steel market size was estimated at USD 9200.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Annealed Spring Steel market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
