Abstracts

Annulus Casing Packer is a downhole tool used in oil and gas wells to seal the annular space—the gap between the casing and the wellbore or between two casing strings. It is typically installed on the casing and activated after the casing is set in place, using mechanical or hydraulic force to expand a sealing element against the surrounding surface. This creates a pressure-tight seal that prevents the migration of fluids or gases between different formation layers. Annulus casing packers are essential for maintaining zonal isolation, improving cementing efficiency, and ensuring the structural integrity of the well throughout its lifecycle. They are commonly used in complex well designs, including deviated and horizontal wells, where effective annular sealing is critical to well performance and environmental protection.

The global Annulus Casing Packer market size was estimated at USD 131.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
